### 1.) Introduction

This report represents a finding of a secure code review performed on Bludit CMS, an open source PHP blogging application. The goal of this audit was to identify security vulnerabilities in the source code using both automated scanning tools and manual code review techniques.

### 2.) Tools used

- Semgrep version 1.167.0 - Automated static analysis scanner
- Ripgrep v15.1.0 - Code pattern searching.
- Git - Source code download.
- VS Code - Code navigation and review
- BurpSuite community - Web application testing.

### 3.) Target Applications

Application: Bludit CMS

Language: PHP

Files Scanned:
